

LEGAL RESTRICTIONS ON THE COPYING OF COMMERCIAL SOFTWARE

Now that you have obtained a new software package for your CIA personal computer, you should be aware that there are legal restrictions against making unauthorized copies of the diskettes containing this software.

Most software packages have some form of copyright protection and many commercial software companies are vigorously pursuing civil legal remedies against anyone found to be copying their programs without authorization. Several major software firms have successfully sued both corporations and their individual employees for using "pirated copies" of software. Some pending suits are asking for damage awards of several million dollars from the accused companies and several hundred thousand dollars from the employees. Agency employees must not engage in the unauthorized duplication of software diskettes entitled to copyright protection. Such action would harm the relationship the Agency has with our contractors and prove detrimental to the Agency in the long run.

The software you have obtained from the Agency's PC Software Center was purchased by the Agency under a license permitting its use under certain conditions. The license permits making one copy of the software for back-up purposes, but additional copies must not be made without the written permission of the manufacturer.

The Software Center understands that the need frequently arises for numerous copies of a given software package. The Center will work with the distributor and manufacturer to acquire the best possible price and license arrangements. The nature of the Agency's security requirements and the potential size of our purchases have enabled us to obtain changes in some standard license agreements.

When you signed for the software you received from the Center, you acknowledged your responsibility to protect the copyright interests of the software company. If you have questions about what can be considered authorized use of a copyrighted product, call the PC Software Center on
